Assignment -2

Assignment Date	21 November 2022
Student Name	Harish Balaji M
Student Register Number	212219060105
Topic	VirtualEye - Life Guardfor Swimming Pools to Detect Active Drowning

```

Split the data into dependent and independent

variables.

Dependent Variable : A dependent variable is a variable whose value depends on another variable.

Independent Variable : An Independent variable is a variable whose value never depends on another variable.

Split the data into training and testing

The train-test split is used to estimate the performance of machine learning algorithms that are applicable for prediction-based Algorithms/Applications. By default, the Test set is split into 30 % of actual data and the training set is split into 70% of the actual data.

```
In[18]:  from sklearn.model_selectionimport train_test_split
